

## Rubber Stamp Description and Price List

All stamps are cut by hand from Speedball 'Speedy-carve' rubber and are mounted on foam over well sanded hardwood blocks. These materials are the best available and are chosen with durability and print quality in mind rather than short-term economy. Dimensions given are approximate, as stamps and blocks are trimmed to reduce material wastage. Prices are based primarily on time required for preparation. The largest stamps (5" x 7") are much more intricate and detailed and use more material than the smallest (2" x 2").

I am working on making scaled-down (and less expensive) versions of the images currently offered at 5" x 7" but of course detail will have to be sacrificed somewhat. Please inquire if you are interested in ordering smaller versions of stamps listed as 5" x 7" or depicting species not represented here.

### Images

Scanned images of prints made with the stamps listed below may be viewed at:

(Please note that most of these prints were made with the first generation stamps and that stamps ordered now will show improvements in detail and style)

### Options

Stamp blocks can be fitted with a t-nut that will accept a handle with a threaded stud. For fitting a t-nut add \$4 per stamp. Handles with threaded studs to attach to blocks equipped with t-nuts are \$4 each. T-nuts are flush-mounted to minimize damage to stamps that are stacked together.
